## Technical Specifications

## DESCRIPTION

The OEM (MOME) board allows System Integrators to implement the communication with a Smart Meter via Band A Power Line (PLC). MOME board can be interfaced with all the Smart Meters manufactured and remotely managed by e-distribuzione, connected to Low Voltage network.
Applications developed by System Integrators can use communication services, offered by OEM module, by connecting to the UART port available on the J6 connector, and by implementing the client side part of the application protocol (defined in another specific document).

## OPERATING CONDITIONS

| Parameter | Description | MIN | TYP | MAX | Unit |
| :--- | :--- | :---: | :---: | :---: | :---: |
| T stg | Storage Temperature | -25 |  | 85 | ${ }^{\circ} \mathrm{C}$ |
| T env | Environmental Temperature | -25 |  | 70 | ${ }^{\circ} \mathrm{C}$ |
| H env | Relative Humidity (non-condensing) | 5 |  | 95 | $\%$ RH |

| DIMENSIONS AND WEIGHT |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Description | MIN |  |  |  | Unit |
| Dimensions | 55 (L) x 48 (W) x 12 (H) |  |  |  | mm |
| Weight | approx. 30 |  |  |  | gr |
| CARATTERISTICHE ELETTRICHE |  |  |  |  |  |
| Parameter | Description | MIN | TYP | MAX | Unit |
| General |  |  |  |  |  |
| Vin | Supply Voltage | 12.35 | 13 | 13.65 | V |
| Pin (std-by) | Stand-by Load |  | 0.5 |  | W |
| Pin (tx) | Transmission Load |  | 3.5 |  | W |
| Tstby | Maximum RTC retention without power supply |  |  | 5 | years |
| PLC |  |  |  |  |  |
| lout | Maximum Current during Transmission (1s period, $\delta=50 \%$ ) |  | 500 |  | mA |
| Vac | Maximum AC Voltage |  |  | 250 | Vrms |
| Outputs |  |  |  |  |  |
| Vout 3V3 | Output voltage 3V3 | 3.23 | 3.3 | 3.37 | V |
| lout 3V3 | Maximum Output Current |  |  | 100 | mA |

## CONNECTION LINKS

## User Application Interface (J6)

Male connector set up, $2 \times 4$ pins, $\mathrm{P}=1.27 \mathrm{~mm}, \mathrm{H}=6.3 \mathrm{~mm}$

| Pin | Signal | Notes |
| :--- | :--- | :--- |
| 1 | RS-485_A | Reserved |
| 2 | RS-485_B | Reserved |
| 3 | GND |  |
| 4 | GND |  |
| 5 | UART-RX | 3.3 V level |
| 6 | UART-TX | 3.3 V level |
| 7 | +3.3 V | output |
| 8 | +3.3 V | output |

The below picture offers a hint on how to identify the pins number on connectors.

## Power supply DC (J1)

Phoenix 1862577 connector set up, female, 2 pins, $\mathrm{P}=3.81 \mathrm{~mm}$

| Pin | Signal | Notes |
| :--- | :--- | :--- |
| 1 | GND |  |
| 2 | +13 V |  |

The position of the connector pins are indicated in the bottom side of the PCB.

PLC network coupling for linking to Low Voltage customer network (J3)
Phoenix 1786404 connector set up, female, 2 pins, $P=5.08 \mathrm{~mm}$

| Pin | Signal | Notes |
| :--- | :--- | :--- |
| 1 | Line |  |
| 2 | Neutral |  |

The position of the connector pins are indicated in the bottom side of the PCB.

NOTE: It is necessary to protect PLC coupling circuit PLC (J3 connection) by means of a delayed fuse rated 3.15A 250 V

## POWER SUPPLY REQUIREMENTS

The OEM PLC module does not include a power supply section. Hence, it requires devices developed by System Integrators to provide power supply. The power supply is brought to the module through J1 connector. The power supply, realized by System Integrators' device, must necessarily fulfill these requirements:

- Output regulated voltage: $13 \mathrm{Vdc} \pm 5 \%$
- Minimum output current: 500mArms
- Input impedance ( 230 V ca side, where the network PLC coupling is connected): > $100 \Omega$ between line and neutral in the frequency range from 60 kHz up to 90 kHz
- Conducted Emissions Level ( 230 V ca side): 40 dBuV in the frequency range from 60 kHz up to 90 kHz

## NOTES:

- Output voltage level is required to guarantee the maximum amplitude of the PLC signal ( 7 Vpp ), allowed by CISPR 22 without leading to harmonic distortions (refer to following diagram)
- Input impedance influences the PLC signal level injected on the same network though J3 connector
- It is necessary to protect PLC coupling circuit (J3 connection) by means of a delayed fuse rated 3.15A 250 V

Disturbance voltage limits (measured at power supply terminals)

MECHANICAL DRAWING

## MECHANICAL FIXING

Mechanical fixing arrangements for MOME are left to the System Integrator that integrates MOME in his own devices; to this extent please refer to indications offered by the following picture:

HATCHED AREAS: MOUNTING PADS FOR FIXING CLIPS
The final application shall consider the mechanical and thermal stresses to which MOME could be exposed. It is suggested to adopt solutions allowing access and removal of MOME module. Fixing Hole diameter is 3.2 mm .
